Preconditions:	1. User is logged in 2. The inventory page is opened	1. User is logged in 2. The inventory page is opened	1. User is logged in 2. The inventory page is opened	1. User is logged in 2. The inventory page is opened 3. [Optional] Check the keyboard navigation map in "Wave" on the Order tab	1. User is logged in 2. The inventory page is opened
Steps to Reproduce:	1. Add product to the shopping cart 2. Open the shopping cart page. 3. Change the quantity of product using the quantity selector 4. Observe the shopping cart list	1. Observe the product name on the inventory page. 2. Verify that the description corresponds to the correct product.	1. Observe the product description on the inventory page. 2. Verify that the description corresponds to the correct product.	1. Press the Tab key to navigate through all interactive elements from top to bottom. 2. Observe the highlight on the focus element	1. Inspect the element with Chrome DevTools 2. Open Elements >Accessibility >Computed Properties>Name: "" 3. Observe a ""aria-label"" field 4. Move to the next element
Expected Result:	The product quantity is updated correctly when the same product is added multiple times or when the quantity value is changed.	The product title displays a clear, user-friendly name without technical or code-related strings.	The product description displays a clear, user-friendly name without technical or code-related strings.	All interactive elements are clearly visible and visually highlighted when focused	The inventory page elements include accessible labels that are announced correctly by screen readers and allow users to understand and complete the form independently.
Actual Result:	The system does not allow changing the product quantity. The quantity field remains unchanged after adding the same product twice.	The product title includes a technical string ("Test. allTheThings()"), which is visible to the user.	The product description includes a technical string ("carry. allTheThings()"), which is visible to the user.	The visual appearance of interactive elements remains unselected. The user needs to count the "Tab" clicks to understand which button they clicked. All keyboard navigation works properly.	The interactive elements don't contain accessible labels and are not properly announced by screen readers.
